## EXPERIENCE

### Hazeltree

#### Project Manager

Spring 2018 – Summer 2020 New York, NY

- Project manager tasked with onboarding clients onto the Hazeltree Collateral and Recon products
- Regularly interact with our product and development team to facilitate client driven product enhancements
- Created project plan with detailing owner, date, and target completion date
- Provided weekly status updates containing outstanding items, owners of items, and expected date of completion to ensure client transparency
- Tracked billable hours of implementation work to ensure we are in line with projected budget and timeline
- Provided training on Hazeltree products to clients both on-site and over WebEx
- Tested product functionality to validate product enhancements and ensure no regression occurred

### Oppenheimer Asset Management

#### Junior Overlay Portfolio Manager

Spring 2016 – Spring 2018 New York, NY

- Part of a four-person team tasked with providing model driven performance for roughly 15,000 accounts and over \$6 billion dollars in assets under management
- Manage portfolio drift of both internal and externally managed accounts.
- Manage portfolio drift of both internal and externally managed accounts.
- Part of team that led in-house implementation of Vestmark, a portfolio management system now used by all financial advisors at Oppenheimer (this entailed testing daily functionalities such as trade generation, contributions, withdrawals, and writing internal procedures for such tasks)
- Daily responsibilities include pre-trade review for existing clients, trade implementation for new accounts, investment allocation changes, and cash and security contributions and withdrawals

## PROJECTS

**Tenant Truths** (React, Rails, PostgreSQL, Semantic UI React, CSS)  
**A react/rails application inspired by StreetEasy and Yelp, this application allows users to review, rate, and upload photos of apartment listings to ensure prospective tenants have transparency into apartments**

[Live Link](#)

GITHUB [CLIENT](#) / [SERVER](#)

- Utilized Realtor.com API to seed real apartment listings into database and portray in front end
- Created multi-tiered filter functionality to allow a user to search by number of bedrooms, bathrooms, and/or price
- Implemented image upload capability with JavaScript's FileReader
- Integrated EmailJS so a user may generate an email to the listing broker
- Created component hierarchy so larger scalability may be accomplished
- Deployed Application using Heroku for the backend and Netlify for the frontend(to be completed this week)

**Breathe** (JavaScript, Rails, PostgreSQL, CSS)

**A single page meditation application created with Ruby on Rails and vanilla JavaScript that allows users to browse and listen to meditation audios by category**

GITHUB [CLIENT](#) / [SERVER](#)

- Created full CRUD capabilities, allowing a user to add and remove audios from their favorite playlist
- Implemented a carousel image display so a user may select the image for their meditation
- Audio volume may be adjusted, and tracks may be fast-forwarded, paused, and stopped in UI
- Styled application with Semantic UI and custom written CSS
- Encrypted login password with Bcrypt, to salt and hash passwords

## EDUCATION
